

CONSTRUCTION · MANAGEMENT · WORKFORCE · ARCHITECTURE · NEW JERSEY

New Jersey needs a construction-management workforce pathway. We are building it.

Aedifica connects overlooked talent, education institutions, workforce partners, and employers through disciplined, credential-aligned programs designed for credible entry, advancement, and measurable outcomes.

- Partner with Aedifica
- Explore Aedifica Rebuild

Initial launch focus: Rebuild adult bridge cohorts and Launch pathway-design services. Expansion offerings follow credible implementation evidence and outcome reporting.

LAUNCH FOCUS	CORRIDOR	MODEL	PRIOR DELIVERY
Rebuild & Launch	Essex–Hudson–Passaic–Union	Employer-validated, outcome-reported	Building Bridges · 21 students

THE GAP

The talent exists. The structured route does not.

New Jersey's construction workforce problem is not aggregate scarcity. It is channel formation. Available workers, CTE students, and overlooked adults lack a structured, credentialed route into employer-ready construction-management work.

Pre-apprenticeship programs tend to produce laborer-track graduates. Large general contractors hire from four-year programs and union sponsorships. Between them sits a gap: no organization in the state systematically produces the supervisory-track talent — project administration, estimating, project controls, coordination — that mid-market contractors say they are most willing to interview for but cannot find.

THE AEDIFICA MODEL

Workforce architecture, not isolated training.

Five connected offerings, each carrying its own color in the brand system. They link into one pathway — but each is built to stand on its own.

HOW THE PATHWAY HOLDS

A cohort does not start until four artifacts are signed.

Curriculum without an employer commitment is a class. Employer commitment without a recruitment and funding partner is a sales deck. Aedifica becomes a venture only when the four-gate system is signed.

01

CBO / recruitment partner

Recruitment, case management, attendance intervention, supportive services, and data responsibilities.

02

Funding / fiscal partner

A subrecipient, fee-for-service, or employer-funded agreement specifying payment triggers and timing.

03

Employer commitment

A signed letter requiring interviews for a set number of completers, with target roles and wage bands.

04

Articulation pathway

A pathway with a registered apprenticeship sponsor, union local, county college, or employer program.

AUDIENCE

Which part of the pathway do you represent?

Education Institution →

School District / CTE Leader →

Workforce / Community Org →

Employer / Contractor →

Funding / State Partner →

Parent / Family →

OUTCOME REPORTING COMMITMENT

What Aedifica will measure — and report on a consistent definition.

These are commitments, not results. Workforce outcomes for Rebuilding will be published as cohorts are delivered. Placement is reported separately from continuing education, and a definition set in Cohort 1 is the same definition used in Cohort 8.

Completion

WILL REPORT

Cohort completion rate

Reported per cohort on a consistent definition.

Placement

WILL REPORT

Employment placement

At 90 and 180 days, separate from continuing education.

Wage

WILL REPORT

Wage at placement

Wage at placement and progression over time.

READY TO BUILD A PATHWAY?

Whether you are an institution or an employer, the pathway starts with a conversation.

Aedifica can help define the pathway and deliver it with discipline — from the first discovery workshop to a delivered cohort and a published outcome report.

DATUM · THE ANCHOR
#6667AB · RGB 102·103·171 · PMS 2725 C

LAUNCH-STAGE OFFERING

Aedifica Rebuild.

An adult bridge cohort for overlooked and returning learners preparing for construction-management-track opportunity — built employer-backward, not textbook-forward.

- Discuss a Rebuild Cohort
- Sponsor a Cohort

CLAIM DISCIPLINE

A launch-stage offering. Cohort design is complete; outcomes will be published once Cohort 1 is delivered.

POSITIONING

What Rebuild is.

Rebuild does not promise to mint project engineers in twelve weeks. It prepares overlooked adults for immediate entry roles and a documented progression into construction-management-track work through credential-aligned training, digital-construction literacy, employer interviews, and articulation pathways.

WHO IT'S FOR

Built for the people and institutions ready to build.

- ✓ Adults motivated to enter or advance in construction — career changers, veterans, returning citizens, and caregivers returning to work.
- ✓ Workers with field experience who want a bridge from the field into the management side of construction.
- ✓ Workforce boards, community-based organizations, and community colleges seeking a credible adult cohort model.
- ✓ Employers and funders who want to sponsor or interview prepared, emerging talent.

WHAT IT INCLUDES

The work, in the tools of the work.

Construction-management literacy Project lifecycle, roles, and the vocabulary of how work gets coordinated on a jobsite.	Drawings & documentation Reading a simplified set of construction drawings; RFIs, submittals, and project documentation.
Estimating & scheduling Building a basic estimate and a simple schedule, and how the two move together.	Safety & quality Safety documentation and a quality-control walkthrough, with credential-aligned safety prep.
Digital construction exposure Hands-on exposure to the software and AI-assisted tools used in modern construction management.	Capstone & interview week An employer-reviewed capstone, mock interviews, and an employer interview model to close the cohort.

- ✓ A 12-week cohort model; final calendar set with each funding or partner cohort.
- ✓ Credential-aligned safety and CM preparation. Credential authorization is conditional and confirmed per cohort.
- ✓ An outcome-reporting commitment: completion, credential attainment, placement, and retention on a consistent definition.

OUTCOME REPORTING COMMITMENT

What Rebuild will measure.

Commitments, not results. Workforce outcomes are published as cohorts are delivered, on definitions that never change between cohorts.

≥80% Completion Cohort 1 completion target.	≥50% Placement at 90 days Rising to ≥65% by 180 days; reported separately from continuing education.	≥20% Apprenticeship articulation Registered-apprenticeship admission by 180 days.

SERVICES / LAUNCH

QUARRY • THE SOURCE

#8A9A93 • RGB 138•154•147 • PMS 5497 C

LAUNCH-STAGE OFFERING

Aedifica Launch.

Aedifica Launch helps institutions design, fund, and implement construction-management workforce pathways. This is pathway architecture, not merely grant writing.

- Request a Launch Diagnostic
- Request an Institutional Briefing

CLAIM DISCIPLINE

A launch-stage advisory offering, available now. Design and funding support is delivered; outcomes are reported by the programs it stands up.

POSITIONING

What Launch is.

Launch helps institutions design, fund, and implement construction-management workforce pathways. Aedifica defines the target learner, employer need, program model, curriculum map, budget, funding strategy, delivery plan, and outcome measures — the full architecture of a program, ready to fund and run.

WHO IT'S FOR

For institutions with a mandate and an audience.

- ✓ Community colleges, vocational partners, and CTE programs building or redesigning a pathway.
- ✓ Workforce boards, nonprofits, agencies, and community-based organizations pursuing workforce funding.
- ✓ Grant applicants preparing PACE, GAINS, NJEDA, WIOA Title I, or federal apprenticeship submissions.
- ✓ Employers and coalitions that want to anchor a credible local pipeline.

WHAT IT INCLUDES

Architecture, not a grant template.

Grant strategy & proposal authoring Funding strategy and narrative for the right opportunities, with a compliance-aware budget.	Curriculum map & credential alignment A framework mapped to real construction-management roles and recognized credentials.
Employer commitment structure An advisory structure and the interview commitments that keep a program accountable to hiring.	Logic model & KPI dashboard A program logic model and the KPI dashboard funders, boards, and agencies require.
Partner consortium design A four-party cell — recruitment, fiscal, employer, articulation — assembled and aligned.	Implementation playbook A realistic calendar, staffing plan, and reporting framework through the first cohort.

PUBLIC-SECTOR RESOURCES

Reference links for partners — each a placeholder pending official URL verification before launch.

- NJEDA — workforce, innovation & economic-development funding
- NJDOL — apprenticeship / pre-apprenticeship (NJBUILD, PACE, GAINS)
- NJDOE — CTE / Perkins V program-of-study information

EXPANSION-STAGE OFFERING

Aedifica Pathway.

A planned high-school construction-management pathway overlay for career readiness, CTE alignment, capstones, teacher support, and employer-informed learning.

- Build a School Pathway
- Discuss a District Pilot

CLAIM DISCIPLINE

A planned, expansion-stage offering informed by five years of prior high-school engineering delivery. It sequences after Cohort 1 outcome data publishes.

POSITIONING

What Pathway is.

Aedifica Pathway is a planned high-school construction-management pathway overlay. Its instructional design is informed by five years of prior pre-college engineering delivery to high-school audiences. It is positioned here as planned and expansion-stage; it sequences after Rebuild Cohort 1 produces outcome data.

WHO IT'S FOR

For schools that want CM to be visible early.

- ✓ High schools and districts that want construction management visible as a serious career direction.
- ✓ Charter networks and county vocational schools building CTE programs of study.
- ✓ Educational service commissions and CTE stakeholders aligning to Perkins V outcomes.
- ✓ Parents who want to understand where a construction-management pathway can lead.

WHAT IT INCLUDES

Built up in layers, like a curriculum.

School-based curriculum Semester or year modules that move from idea to design to estimate to schedule to the field.	CTE & program-of-study alignment Designed for alignment with CTE pathways and Perkins V program-of-study expectations.
Credential & articulation mapping Mapping where appropriate, with conditional language until authorization is confirmed.	Teacher professional development Structured PD so a district's own educators can deliver the pathway with confidence.
Capstones & employer mentors Project capstones and employer-informed, work-based learning support.	District reporting Reporting designed for district and program-of-study requirements.

EXAMPLE COURSE

An example course — Principles of Civil Engineering — is mapped to NJ, NY, and NGSS engineering connections. Standards codes are presented as alignment targets, to be confirmed against current NJSLS / NYS revisions before publication.

PATINA · THE MARK

#836479 · Elderberry · PMS 5125 C

EXPANSION-STAGE OFFERING

Talent Pipeline.

Aedifica helps employers shape and access emerging construction-management talent through role definition, capstones, interviews, mentoring, and retention feedback — with no guarantee of hires.

- Join Employer Discovery
- Host a Capstone Review

CLAIM DISCIPLINE

An expansion-stage employer offering. It activates as Rebuild cohorts produce graduates, and converts to placement-based terms once placement and retention data exist. No hires are guaranteed.

POSITIONING

What Talent Pipeline is.

Talent Pipeline gives employers a structured way to shape and access emerging construction-management talent through role validation, capstone participation, interviews, mentoring, and retention feedback. It does not guarantee hires; it builds a credible, repeatable relationship to prepared candidates.

WHO IT'S FOR

For employers who want to shape talent, not just hire it.

- ✓ Mid-market general contractors seeking emerging supervisory-track talent.
- ✓ Specialty subcontractors and CM firms building a reliable interview pipeline.
- ✓ Developers and trade associations supporting a regional talent base.
- ✓ Employer coalitions anchoring a local construction-management workforce.

WHAT IT INCLUDES

A founding employer membership.

Role validation Define the real entry and progression roles you hire for, with titles and wage bands.	Advisory participation An advisory-board seat that keeps curriculum tied to your actual hiring needs.
Capstone & interview days Project-simulation review, mock interviews, branded interview days, and first-look access.	Retention feedback Graduate profiles when available and retention check-ins once placement data exists.

- ✓ A founding employer membership with an advisory seat and one custom training module.
- ✓ No guarantee of hires — the relationship is structured around access and preparation, not promises.
- ✓ Conversion to retainer and placement-based terms once placement and retention data exist.

EXPANSION-STAGE OFFERING

Aedifica Explore.

Early-exposure modules introducing students to construction, infrastructure, engineering, design, technology, and the built environment — an on-ramp, not an endpoint.

- Bring Explore to a School
- View Building Bridges

CLAIM DISCIPLINE

An expansion-stage offering built on a completed middle-school STEM implementation. Prior delivery is evidence of engagement, not a workforce-outcome claim.

POSITIONING

What Explore is.

Aedifica Explore introduces younger learners to the built environment through accessible, high-energy, project-based activities. It builds on a completed middle-school implementation — the Bridging Brilliance program at Hillside Innovation Academy — which provides local evidence of student engagement and in-district delivery experience.

WHO IT'S FOR

For the people opening the first door.

- ✓ Middle and high schools, districts, and STEM coordinators seeking project-based exposure.
- ✓ After-school programs, enrichment providers, and community partners.
- ✓ Parents and families looking for a first, real engineering experience for a student.
- ✓ Funders supporting early STEM access and career awareness.

WHAT IT INCLUDES

Hands on the materials, early.

Project-based learning Bridge and infrastructure design challenges that students build, test, and present.	Teamwork & public speaking Structured team roles and a public showcase that build communication and confidence.
STEM confidence & career awareness Early exposure to engineering, planning, sustainability, and the people who build things.	Flexible formats A single workshop, a multi-session series, a summer camp module, or a partner-funded program.

FEATURED EXAMPLE

Building Bridges — delivered with Hillside Innovation Academy and Stevens Institute of Technology — is the clearest example of Explore in practice. Publication of partner references should be confirmed as approved before launch.

PROJECTS & IMPACT

Evidence first — and honest about what is proven versus planned.

Aedifica separates two things that are easy to blur: verified prior educational delivery, and the workforce outcomes Rebuild will report once cohorts run. This page keeps them apart on purpose.

VERIFIED PRIOR DELIVERY

A credible, hands-on STEM pathway, already delivered.

Aedifica's foundation is real delivery — construction-management practice, pre-college engineering programming, and middle-school STEM. The Building Bridges project is the clearest example.

VERIFIED PRIOR DELIVERY · MIDDLE-SCHOOL STEM · EXPLORE

Building Bridges at Hillside Innovation Academy

A 10-week program in which 21 Hillside middle schoolers designed, built, tested, and defended a bridge across the Hudson River — a Hillside Innovation Academy × Stevens Institute of Technology collaboration that informs the Aedifica Explore model.

What this does and does not prove

Building Bridges demonstrates instructional capability, in-district delivery, and student engagement. It is **not** evidence of Aedifica workforce-placement outcomes — those will be reported separately as Rebuild cohorts are delivered.

BUILDING BRIDGES · VERIFIED FIGURES

Documented results from the 2025 cohort.

Every figure is drawn directly from the program's reporting. The eighth-grade next-step figure reflects acceptance into selective STEM high schools, not workforce placement.

21

VERIFIED

Students served

Seventh and eighth graders completed the 10-week program.

10 wks

VERIFIED

Program length

A 10-week, school-day STEM elective.

22%

VERIFIED

Of HIA enrollment

Share of Hillside Innovation Academy enrollment the cohort represented.

4

VERIFIED

Capstone teams

Four team bridge prototypes built and defended before professional judges.

55%

VERIFIED

Eighth-grade next step

6 of 11 eighth-graders accepted into selective UCVTS for 2025–26 — advanced STEM, not workforce.

Year 2

VERIFIED

Collaboration

Second year of the Hillside × Stevens collaboration, funded by the Engineering Information Foundation.

OUTCOME REPORTING COMMITMENT

What Aedifica will measure for Rebuild.

Commitments, not results. Workforce outcomes for Rebuild are published as cohorts are delivered. Placement is reported separately from continuing education, and a definition set in Cohort 1 is the same definition used in Cohort 8.

Completion

WILL REPORT

Cohort completion rate

Reported per cohort on a consistent definition.

Credential

WILL REPORT

Credential attainment

Share of completers earning credential-aligned outcomes, where authorized.

Placement

WILL REPORT

Employment placement

At 90 and 180 days, separate from continuing education.

Retention

WILL REPORT

Retention

At 90 and 180 days, never blended with placement.

Apprent.

WILL REPORT

Apprenticeship articulation

Registered-apprenticeship admission among placements.

Wage

WILL REPORT

Wage at placement

Wage at placement and progression over time.

CLAIM DISCIPLINE

All measurable claims should be verified before publication. Outcome figures for Rebuild are future reporting commitments, not achieved results, and will be published as cohorts are delivered.

IMPACT / BUILDING BRIDGES

VERIFIED PRIOR DELIVERY · MIDDLE-SCHOOL STEM

Building Bridges.

A 10-week program in which 21 Hillside middle schoolers designed, built, tested, and defended a bridge across the Hudson River — a Hillside Innovation Academy × Stevens Institute of Technology collaboration that informs the Aedifica Explore model.

- View Aedifica Explore

Bring Explore to Your School

PROGRAM OVERVIEW

Why the project matters.

Middle school is where students decide whether STEM is for them. Building Bridges meets students at that inflection point with real engineering work: define a problem, model and cost a design, weigh risk and sustainability, build and test a prototype, and defend the result in public.

The program ran as a school-day STEM elective at a STEM-focused magnet middle school, with the school's own instructors carrying the learning through the week between sessions — a model of shared ownership between a district and a university partner.

PROGRAM GOALS

- ✓

Engage middle schoolers at a critical STEM inflection point through a sustained, hands-on challenge.
- ✓

Connect engineering design to geography, transportation, community impact, and sustainability.
- ✓

Build reasoning, data analysis, cost estimation, written communication, and public presentation.
- ✓

Serve as a STEM capstone and an on-ramp to high-school engineering pathways.

CONFIRMED FIGURES

Impact and success, on the record.

21

VERIFIED

Students served

Seventh and eighth graders completed the 10-week program.

10 wks

VERIFIED

Program length

A 10-week, school-day STEM elective.

22%

VERIFIED

VERIFIED

Eighth-grade next step

6 of 11 eighth-graders accepted into selective UCVTS — advanced STEM, not workforce.

Year 2

VERIFIED

Collaboration

Second year of the Hillside × Stevens collaboration, EIF-funded.

KEY HIGHLIGHTS

What changed for students.

- ✓

Students moved from describing engineering as “fixing things” to “designing, creating, testing, and improving solutions.”
- ✓

Four teams built and defended bridge prototypes before a panel of professional civil engineering judges.
- ✓

Families filled the room at Stevens for the final showcase, connecting student achievement to home and community.
- ✓

Six of eleven eighth-grade participants earned acceptance into the selective UCVTS for 2025–26.

Student quotes and outcomes are anonymized to protect privacy. No family quote is published without consent, and names, faces, and voices are published only with written permission, including parent or guardian consent for minors.

WHY IT MATTERS TO PARTNERS

Relevant to schools, families, and state partners.

For schools and parents, Building Bridges is a credible example of rigorous, hands-on STEM. For districts and state partners, it demonstrates in-district delivery, university partnership, and a clear line from early exposure toward advanced STEM pathways.

LOOKING AHEAD

An on-ramp, not an endpoint.

Building Bridges informs Aedifica Explore — and connects forward to Pathway as students move toward high-school construction-management and engineering coursework. No outcomes are guaranteed; the work is in keeping the door open.

CLAIM DISCIPLINE

References to the Hillside Innovation Academy and Stevens Institute of Technology partnership should be confirmed as approved for publication before launch. All measurable claims should be verified before publishing.

BRING IT TO YOUR SCHOOL

If this is the experience
you want for your
students, we can design

INSIGHTS / ARTICLE

FUNDERS · WORKFORCE PARTNERS

The missing construction-management pathway in New Jersey

New Jersey's construction workforce problem is not aggregate scarcity — it is channel formation. The supervisory-track route most employers say they want does not yet exist at scale.

The familiar story about construction labor is a story about scarcity: not enough workers. In New Jersey, the more precise problem is channel formation. Available workers, CTE students, and overlooked adults lack a structured, credentialed route into employer-ready construction-management work — the project administration, estimating, project-controls, and coordination roles that mid-market general contractors say they are most willing to interview for but cannot reliably find.

Existing pre-apprenticeship programs tend to produce laborer-track graduates. Large general contractors hire from four-year construction-management programs and union sponsorships. Between those two routes sits a gap: no organization in the state systematically produces supervisory-track talent and proves it with placement outcomes.

Aedifica's thesis is that the opportunity is to build that channel deliberately — employer-backward, credential-aligned, and reported on a consistent definition — rather than to add another general training program to a crowded field. The channel is the product. The outcomes are the proof.

INSIGHTS / ARTICLE

EMPLOYERS · FUNDERS

Why credentials are necessary but not sufficient

A credential opens a door. It does not walk a candidate through it. What converts training into employment is employer validation, articulation, and honest reporting.

Credentials matter. Safety credentials, project-management credentials, and platform certifications are real signals that an employer can read. But a credential is necessary, not sufficient. Plenty of credentialed candidates never convert that credential into a first role, because the credential was never connected to a specific employer's hiring need.

What closes the gap is structure around the credential: an employer who has validated the role, a capstone the candidate can defend, an interview that actually happens, and an articulation pathway into the next step. Those are design choices, not happy accidents.

This is why Aedifica treats employer commitment as a launch gate rather than a nice-to-have. Curriculum without an employer commitment is a class. The credential is the beginning of the conversation, not the end of it.

EMPLOYERS

What employers should validate before supporting a cohort

Before an employer lends its name to a workforce program, there are a handful of things worth confirming — and a few promises worth refusing to make.

An employer's most valuable contribution to a workforce program is not money — it is validation. When a contractor confirms that a curriculum matches the work their teams actually do, and commits to interview qualified completers, the program gains something no grant can buy.

Before lending that validation, an employer should confirm a few things: that the role titles and wage bands in the design are real, that the capstone reflects work the candidate would actually do, and that the program reports outcomes honestly rather than redefining 'placement' to flatter a headline.

Equally important is what an employer should refuse to promise: guaranteed hires. A credible program structures access and preparation, not guarantees. That honesty is what makes the relationship durable.

INSIGHTS / ARTICLE

DISTRICTS · CTE LEADERS

How districts can think about construction-management pathways

For districts navigating CTE redesign, construction management is an under-built program of study with a clear line to credentials, apprenticeship, and college credit.

Federal program-of-study standards require CTE pathways to culminate in college credit, an industry-valued credential, or registered-apprenticeship enrollment. That requirement is pushing districts toward outcomes-reportable redesign — and construction management is an under-built option with a clear line to all three.

The design question for a district is not whether students are interested. It is whether the pathway is visible early enough, rigorous enough, and connected enough to real next steps to be worth a program-of-study slot. That means teacher support, employer-informed capstones, and articulation that a counselor can actually explain.

Aedifica Pathway is designed as an overlay that respects what a district already does well, rather than duplicating it — informed by prior high-school engineering delivery and positioned to sequence after adult-cohort outcomes establish the model.

INSIGHTS / ARTICLE

FUNDERS · WORKFORCE PARTNERS

Why outcome reporting matters in workforce programs

In a field where curriculum is commoditizing, the durable advantage is a published outcomes record that is never quietly redefined.

Curriculum content is commoditizing. Free university programs, published CTE courses, and credential-distribution partnerships mean that lesson plans are no longer scarce. The advantage in workforce development has moved downstream of curriculum.

What compounds is the outcomes record: placement rate, retention rate, wage progression, employer-signed pathways, articulation agreements, and repeat hiring behavior — reported on the same definitions every cohort. A program that reports rigorously and never redefines its terms builds something a competitor cannot copy: trust.

The discipline is unglamorous. Continuing education is reported separately from employment. 'Placement' means the same thing in Cohort 8 that it meant in Cohort 1. That consistency is the moat.

INSIGHTS / ARTICLE

PARENTS · DISTRICTS · FUNDERS

From middle-school exposure to workforce readiness

Early exposure does not place anyone in a job — but it changes who sees the built environment as a place they belong. That is where a pathway begins.

A middle-school engineering program does not produce a construction manager. What it can do is change who imagines themselves in the field at all. In the Building Bridges program, students moved from describing engineering as 'fixing things' to describing it as designing, testing, and improving — and several eighth graders earned acceptance into selective STEM high schools.

That shift is early and quiet, and it should not be oversold. Exposure is an on-ramp, not an endpoint, and no outcomes are guaranteed. But a pathway that only begins in adulthood is starting late for many learners.

The honest framing is the useful one: early exposure widens the doorway. What a learner does after walking through it depends on everything that follows — which is exactly why the pathway has to connect.

INSIGHTS / ARTICLE

FUNDERS · WORKFORCE PARTNERS

How grant-backed workforce pathways should be designed

A fundable pathway is designed before it is funded. The four-party partner cell — recruitment, fiscal, employer, articulation — comes first.

The most common failure mode in grant-backed workforce programs is sequencing: writing the proposal before the partnership exists. A fundable pathway is designed first. The four-party partner cell — a recruitment and case-management partner, a fiscal and reporting partner, an employer commitment, and an articulation pathway — is what turns a proposal into a program.

Each party owns what it does best. Community-based organizations own recruitment and supportive services. Colleges and workforce boards own fiscal capacity and reporting. Employers own role definitions and interview commitments. The program operator owns curriculum, instruction, capstone design, and outcome measurement.

That division of labor is not bureaucracy — it is what lets a program scale beyond a single founder and survive a funder's due diligence. Launch exists to assemble it before the first dollar is spent.

ABOUT

A workforce-architecture company, built from the talent the system overlooked.

Aedifica designs and delivers construction-management career pathways for schools, workforce partners, and employers — with a focus on learners who have talent but lack a clear route into the built environment.

MISSION

From foundations to futures.

Aedifica designs and delivers construction-management career pathways — adult bridge cohorts, school curriculum, and employer pipelines — that move overlooked learners from classroom to jobsite, with outcomes published on the record and an employer-validated capstone behind every credential.

Talent is not missing. The pathway is.

ORIGIN

Earth. Engineers. Education.

Aedifica grew from years of construction-management practice, teaching, pre-college engineering programming, and STEM outreach. The mantra names the work: the earth is the foundation; engineers are the builders of possibility; education is the bridge that lets people enter that world and shape it.

The region is entering a generational period of infrastructure investment — and will need not only engineers and tradespeople but the next generation of construction managers, coordinators, estimators, schedulers, and supervisors. Aedifica exists to build that route for the people ready to contribute.

VALUES

The operating principles behind the work.

Rigor as respect We do not simplify the work to make it accessible. We translate it. Holding learners to a real standard is how we show we believe they can meet it.	Translation, not transmission Curriculum is everywhere; translation is rare. Our job is to move people from where they are into work they can do — in the tools and language employers actually use.
Widened doorways We design for the people traditional systems overlook — justice-impacted adults, returning caregivers, veterans, and others ready to contribute. The talent pipeline, not the side door.	Built to be handed over We do not duplicate what partners already provide. We stay in our lane — curriculum, instruction, capstone, measurement — so the program can scale beyond any single founder.

LEADERSHIP

Three full-time co-founders.

Dr. Karim Karam

CO-FOUNDER & CEO

Leads the graduate Construction Management program at Stevens Institute of Technology. Built and led the workforce at Sarooj Construction across 170+ infrastructure projects and \$1B+ in value. Active PMI-NJ member; MIT graduate study and OpenCourseWare contributor.

Dr. Nicole Silva

CO-FOUNDER & COMMUNITY PARTNERSHIPS

Cross-sector workforce-development experience across Union and Essex counties, with documented community-organization relationships. Cultivated the partnership that enabled the team's existing joint programming.

Kimi Stephenson

CO-FOUNDER & COMMUNITY PROGRAM LEAD

M.S. in Construction Engineering & Management, Stevens Institute of Technology. Professional contact with underserved-adult populations through consulting and state-agency work; co-delivered the Bridging Brilliance program with Dr. Karam.

Advisory board profiles — employer, education, workforce, and community partners — will be added as confirmed.

PRIVACY

Privacy Policy

A plain-language summary of how Aedifica handles information submitted through this website.

Information we collect

We collect only the information you provide through our partnership inquiry form — such as your name, organization, role, email, optional phone number, audience type, interest area, timeline, and message. We do not collect sensitive learner records through this site.

How we use inquiries

We use the information you submit to review your inquiry and respond about an appropriate next conversation. We do not sell personal information, and we do not use form submissions for advertising.

Data minimization

We ask for the minimum information needed to route and respond to an inquiry. Please do not submit Social Security numbers, immigration data, medical or disability information, justice-involvement details about identifiable individuals, resumes, or confidential funding documents.

Sharing

We do not sell your personal information. We may share your inquiry internally with the Aedifica team member best suited to respond.

Contact

Questions about this policy can be directed to the contact listed on our Partner With Us page.
[Contact placeholder — confirm before launch.]

DRAFT NOTICE

This is a non-legal draft suitable for a launch-stage website and requires review by counsel before publication. Last updated: [date placeholder].

ACCESSIBILITY

Accessibility Statement

Aedifica is committed to an accessible, inclusive digital experience.

Our commitment

Aedifica is committed to providing a digital experience that is accessible to the widest possible audience, regardless of ability or technology.

Semantic structure

The site uses semantic HTML, logical heading order, and descriptive landmarks so assistive technologies can navigate it reliably.

Keyboard navigation

Interactive elements are reachable and operable by keyboard, with visible focus indicators throughout.

Contrast & color

We design for readable color contrast and do not rely on color alone to convey meaning.

Alternative text

Meaningful images include descriptive alternative text; decorative motifs are marked so they are skipped by screen readers.

Ongoing improvement

Accessibility is an ongoing effort. We welcome feedback and will work to address issues that are reported to us.

Contact

To report an accessibility issue, contact us through the Partner With Us page. [Contact placeholder — confirm before launch.]

NOTE

Contact details on this page are placeholders to be confirmed before launch.
